

If you receive your electric bill from the City of Naperville ...

Did you know that you may be paying more for your electricity than you have to?

But because of the lack of transparency from Naperville's power supplier,
we don't have access to the data to find that out.

YOU, AS A RESIDENT, SHOULD BE ALARMED BY THIS LACK OF TRANSPARENCY.

Furthermore, almost 70% of Naperville's electricity
comes from coal-fired plants.

And, as the cost of renewable energy continues to decline,
this lack of cost transparency becomes more and more of an issue.

**Every Naperville resident is being forced
to pay for dirty, and most likely
more expensive energy.
But we can change this!**

And here's the urgency...

Naperville's power supplier has recently begun its effort
to extend Naperville's current contract,
yet we still don't EVEN know
what the cost for coal energy is in the current contract.

In order to get full-transparency on the costs of our electricity,
the Mayor and eight members of Naperville's City Council
need to hear from you
and
to feel the pressure to stop abdicating their responsibility
for TRUE oversight of our municipal electricity contract!

**Please contact the Naperville City Council and Mayor
to demand cost transparency and
to NOT renew Naperville's contract for coal-powered electricity**
